Research on solar energy is as sophisticated and intensive in India as anywhere else in the world. For ten months of the year, six to eight hours a day, much of India receives high-intensity-fairly uniform sunshine. The Indian government has therefore given priority to six projects in the development of solar energy. The most important of these is the solar, energized water-pump. The other five are solar power stations, solar distillation and desalination plants, solar air-conditioning units, solar water heaters, solar agricultural dryers. The solar water-pump, which will have a capacity of between two and five horse power, is being developed principally for use in rural areas. The solar power station project hopes to develop a mini power unit that can be used in rural life to collect solar energy and transform it into electrical energy for lights, fans, T.V. sets and small scale machinery. Research on solar destination has been confined to the laboratory suited to converting brackish water into drinking water. Research over the last 15 years has produced three major designs for solar water heater. Agricultural industries stand to gain substantially from the development of a solar dryer.

The sullen stream had no fear for him;

But he turned when safe on the other side
 And built a bridge to span the tide.
 "Old man," said a fellow pilgrim near,
 "You are wasting your strength with building here;
 Your journey will end with the ending day,
 You never again will pass this way;
 You've crossed the chasm, deep and wide,
 Why build this bridge at evening tide?"
